

OneNeck for Healthcare

How can OneNeck help your healthcare organization better serve your patients?

In today's healthcare market, shifting regulations, rapid technological innovation and changing expectations of patients and consumers are posing challenges like never before. In order to adapt to this disruption, healthcare providers need to meet intensifying demands to boost efficiency and agility, while offering an enhanced user experience.

At OneNeck, we know the technology and infrastructure behind a hospital's IT department determines an organization's level of success with meeting patient demands and keeping pace with change. Our cloud and data center services are key in facilitating the ongoing evolution of our healthcare customers while they strive to enhance patient care, quality and safety. While technology services take place behind-the-scenes, it's our services that are responsible for powering applications efficiently, storing data securely and aiding healthcare organizations in meeting the demands of industry and government compliance requirements.

What do OneNeck solutions help healthcare organizations do?

Realize faster, more effective care by providing highly-secure access to health information when and where it's needed.

Improve patient satisfaction by making caregivers available for remote consultations and streamlining patient care processes.

Facilitate better communication with patient-centered collaboration through a highly-secure infrastructure.

Ensure regulatory compliance with a highly secure connection into OneNeck's Tier 3 data centers.

Reap the benefits of cloud with the assurance of a 100% SLA backed hosted private cloud, ReliaCloud®.

What are the benefits?

- Freedom to focus on delivering quality care to patients
- Greater ability to respond to regulatory changes
- Cost tracking and control
- HIPAA information-sharing requirements
- Improved access to information
- Efficient management of suppliers
- More successful IT initiatives using proven methodologies and best practices
- Risk mitigation through business continuity and disaster recovery services

Why OneNeck

OneNeck has expertise leveraging a broad range of technologies and services that will help you operate more efficiently. We provide an end-to-end, technology-independent approach that includes a complete suite of hybrid IT offerings across infrastructure, applications and managed services. This approach enables healthcare organizations to transform their services, improving the overall patient experience.
